OIL FOR EXTERIOR YS---x300

YS---x300 has been formulated for garden furniture and wood floorings for exterior, claddings and log houses. This oil assures the wood to be resistant to trampling and sliding as well as guaranteeing waterproof

properties. Its special formulation contains: 1) free radicals absorbers that reduce sun damages; 2) UV full-spectrum absorbers that reduce maintenance operations; 3) special fungicides.

This product is easy to apply, particularly suitable for hard and soft woods low in tannin. The film does not peel off, but it wears out. It is possible to renovate the application without sanding.
